EDUCATION

2019 - present
Informatics Technology
student specializing in **Software Engineering**
Tishreen University, Latakia

EXPERIENCE

Frontend department of blog project(connected to laravel api) :

Features :
 - **Authentication and Autherization** with JWT(json web token) .
 - **Strong validation** before send request to API in all form using react-hook-form .
 - **Protected routes** depending on (Roles , Registeration) using react-router-dom .
 - **Using Intersection Observer** to load next pagination data when scroll
 - There is the three main roles :
   user ,no permissions .
   Admin ,permissions: (Add Post , Edit Post , Delete Post) .
   Super Admin ,permissions: (Add Post , Edit Post , Delete Post ,Edit Users , Delete Users) .
 - Unregistered users can read first 50 word of post only .
 - Save needed previos routes in session so :
   - when register from post page return to same post page .
   - when delete or update from home route or posts route return to same route.

Technologies :
 - react hooks
 - context api
 - react-quill
 - react-router-dom
 - react-cookies
 - react-hook-form
 - html-react-parser
 - axios

Translate app (challenge from devchallenges.io) :

Features :

- By default, it should translate 'Hello, how are you' to French.
- Users can change translating text with a maximum of 500 characters.
- Users can see the translated text after selecting the Translate button.
- Users can choose different languages to translate from. They should see at least 3 options: Detect Language, English and French.
- Users can switch translation language and translated language.
- Users can have the option to listen to the translating and translated texts.
- Users can copy the translating and translated texts.

Technologies :

react hooks , context api

Blog project with firebase :

Features :

- Non registered users can see all post but cannot add posts.
- Registered users can add posts.
- In all post section when scroll more posts will appear.
- Strong validation form using react-hook-form.

Technologies :

react hooks , context api , firebase , react-bootstrap , react-quill , react-hook-form , react-router-dom

Rest Countries API (challenge from frontend mentor) :

Features :

- See all countries from the API on the homepage.
- Search for a country using an input field in arabic or english.
- Filter countries by region.
- Click on a country to see more detailed information on a separate page.
- Click through to the border countries on the detail page.
- Toggle the color scheme between light and dark mode.

Technologies :

typescript , tailwind css , html , css
